

Setting up a headphone CUE in djay for iPad or iPhone

1. Launch the [djay for iPad](#) or [djay for iPhone](#) app.
2. Press the **Settings** button in the center of the window

3. In the window that opens, set **Split Output** to **ON**

4. A message will appear, reading, "Split Output Enabled. Please make sure you have a split output adapter connected to your headphone jack." Click **OK**.

5. Any 1/8" TRS Male to dual 1/8" TS Female cable can be used to split the stereo headphone output to two mono outputs - one for the CUE signal, one for the MAIN OUTPUT.

Algoriddim (the developer of the djay app) recommends the cable linked below:
